

***Amazing new “alternative” keyboard  
lets you stay connected to the world  
even if you can’t type!***

Dear Friend,

Do you – or someone you love – struggle with regular keyboards? If you have any kind of physical limitation with your hands, wrists, or fingers – you know how difficult it can be to use a traditional computer keyboard.

And yet, the keyboard is how we stay connected to the entire world nowadays!

That’s why we, a team of researchers and scientists, came up with the most amazing “alternative” keyboard you’ve ever seen.

It’s really not a keyboard at all. Yet it lets you communicate just as if you had no limitations at all...!

I invite you to visit to learn more at [orbitouch.com](http://orbitouch.com).

If you like what you see, you can order one of these “alternative keyboards” right from the website at no risk.

I know you’ll enjoy all the possibilities that come with your new “keyboard” that’s specially designed for those who aren’t physically able to type.

Sincerely,

*Pete McAlindon, Ph.D.*
